

Informe automatizado de topografía de la lesión talámica mediante ultrasonido focal de alta intensidad

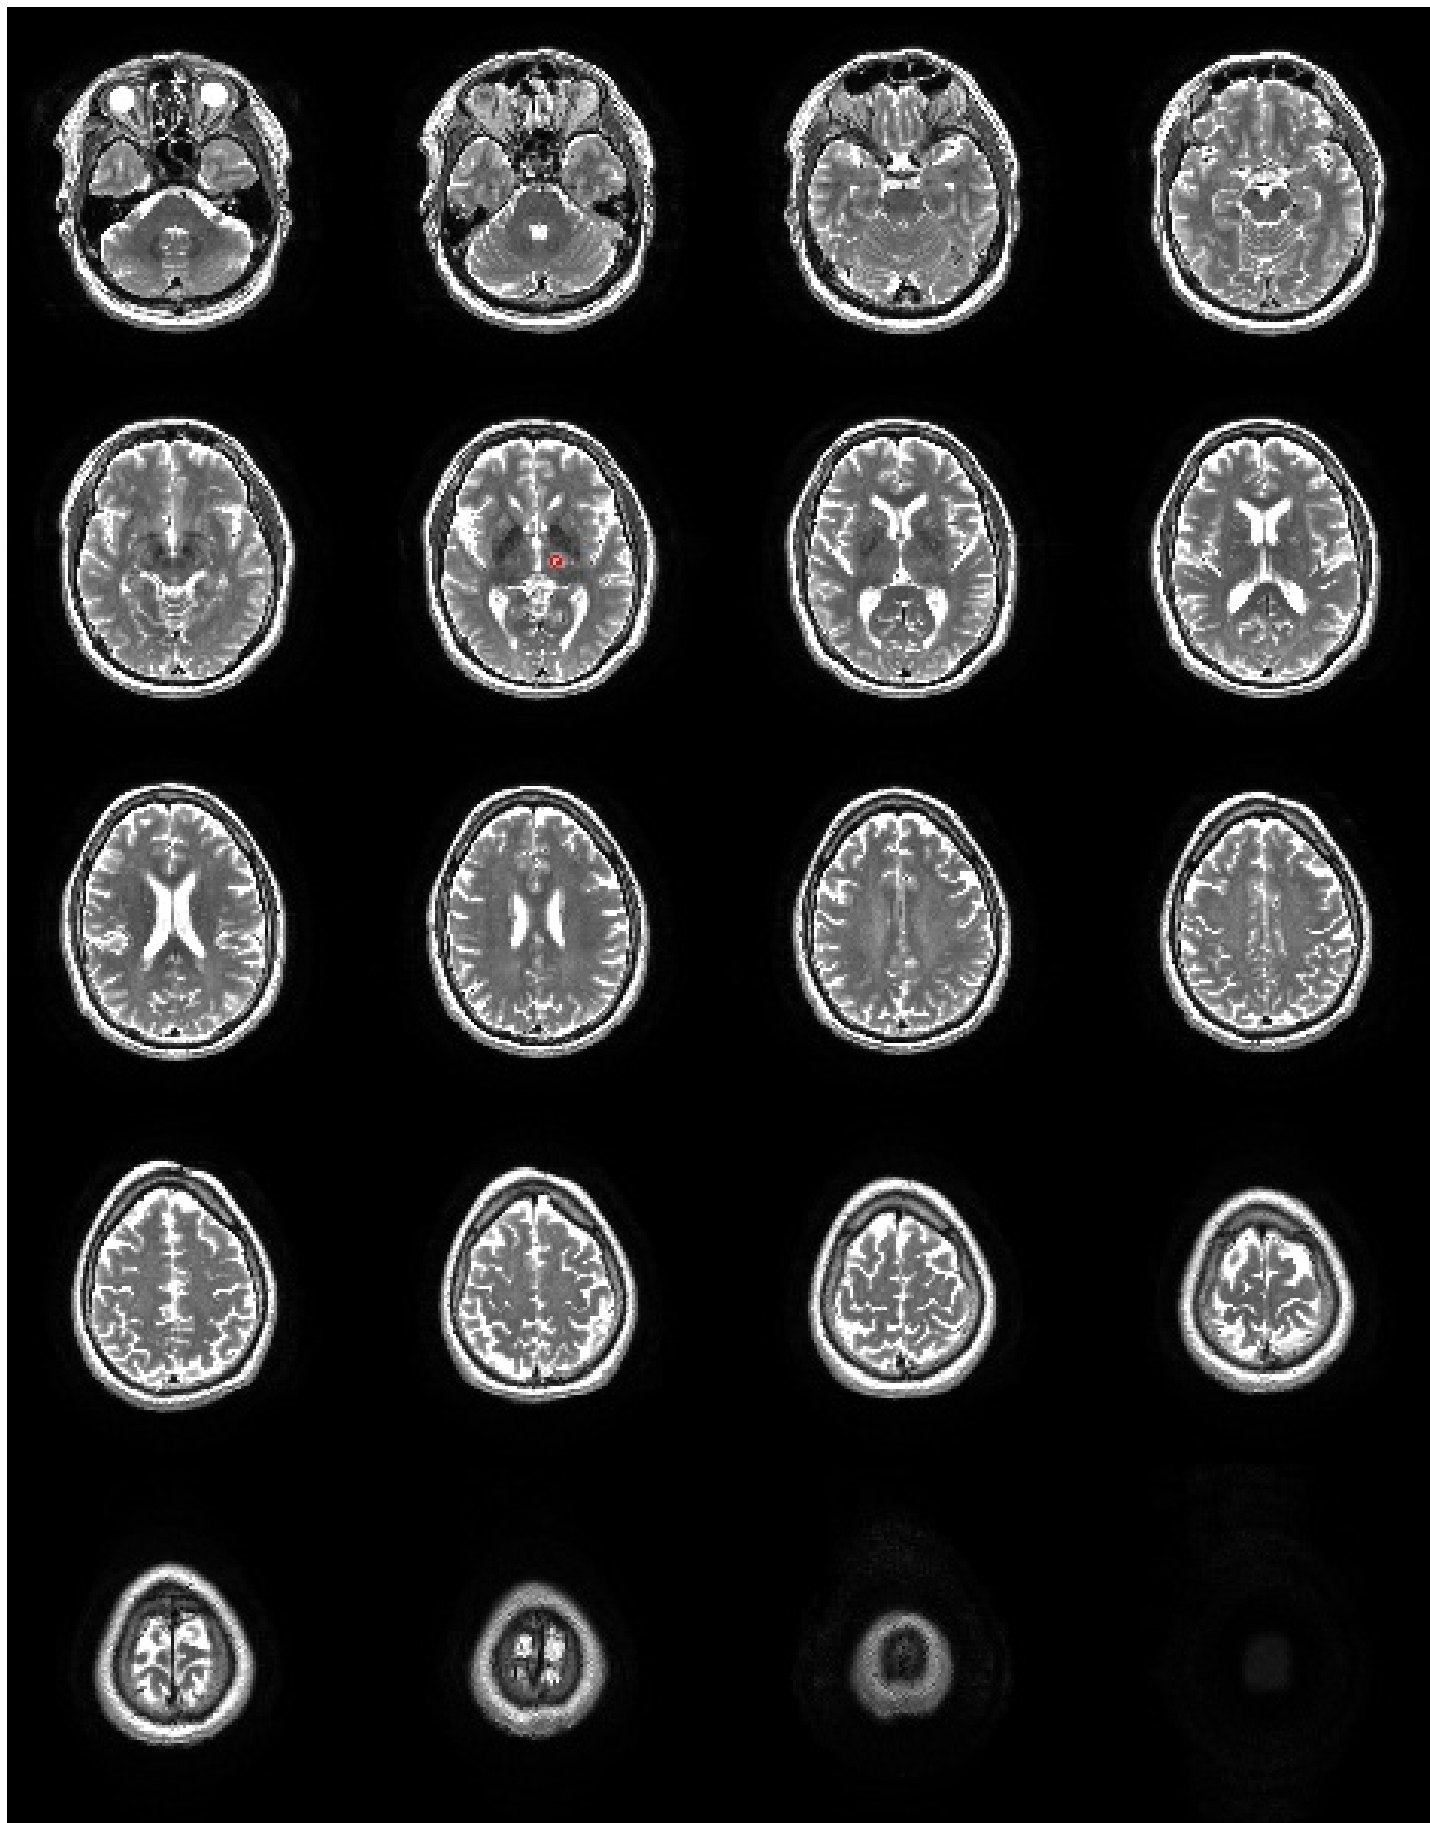

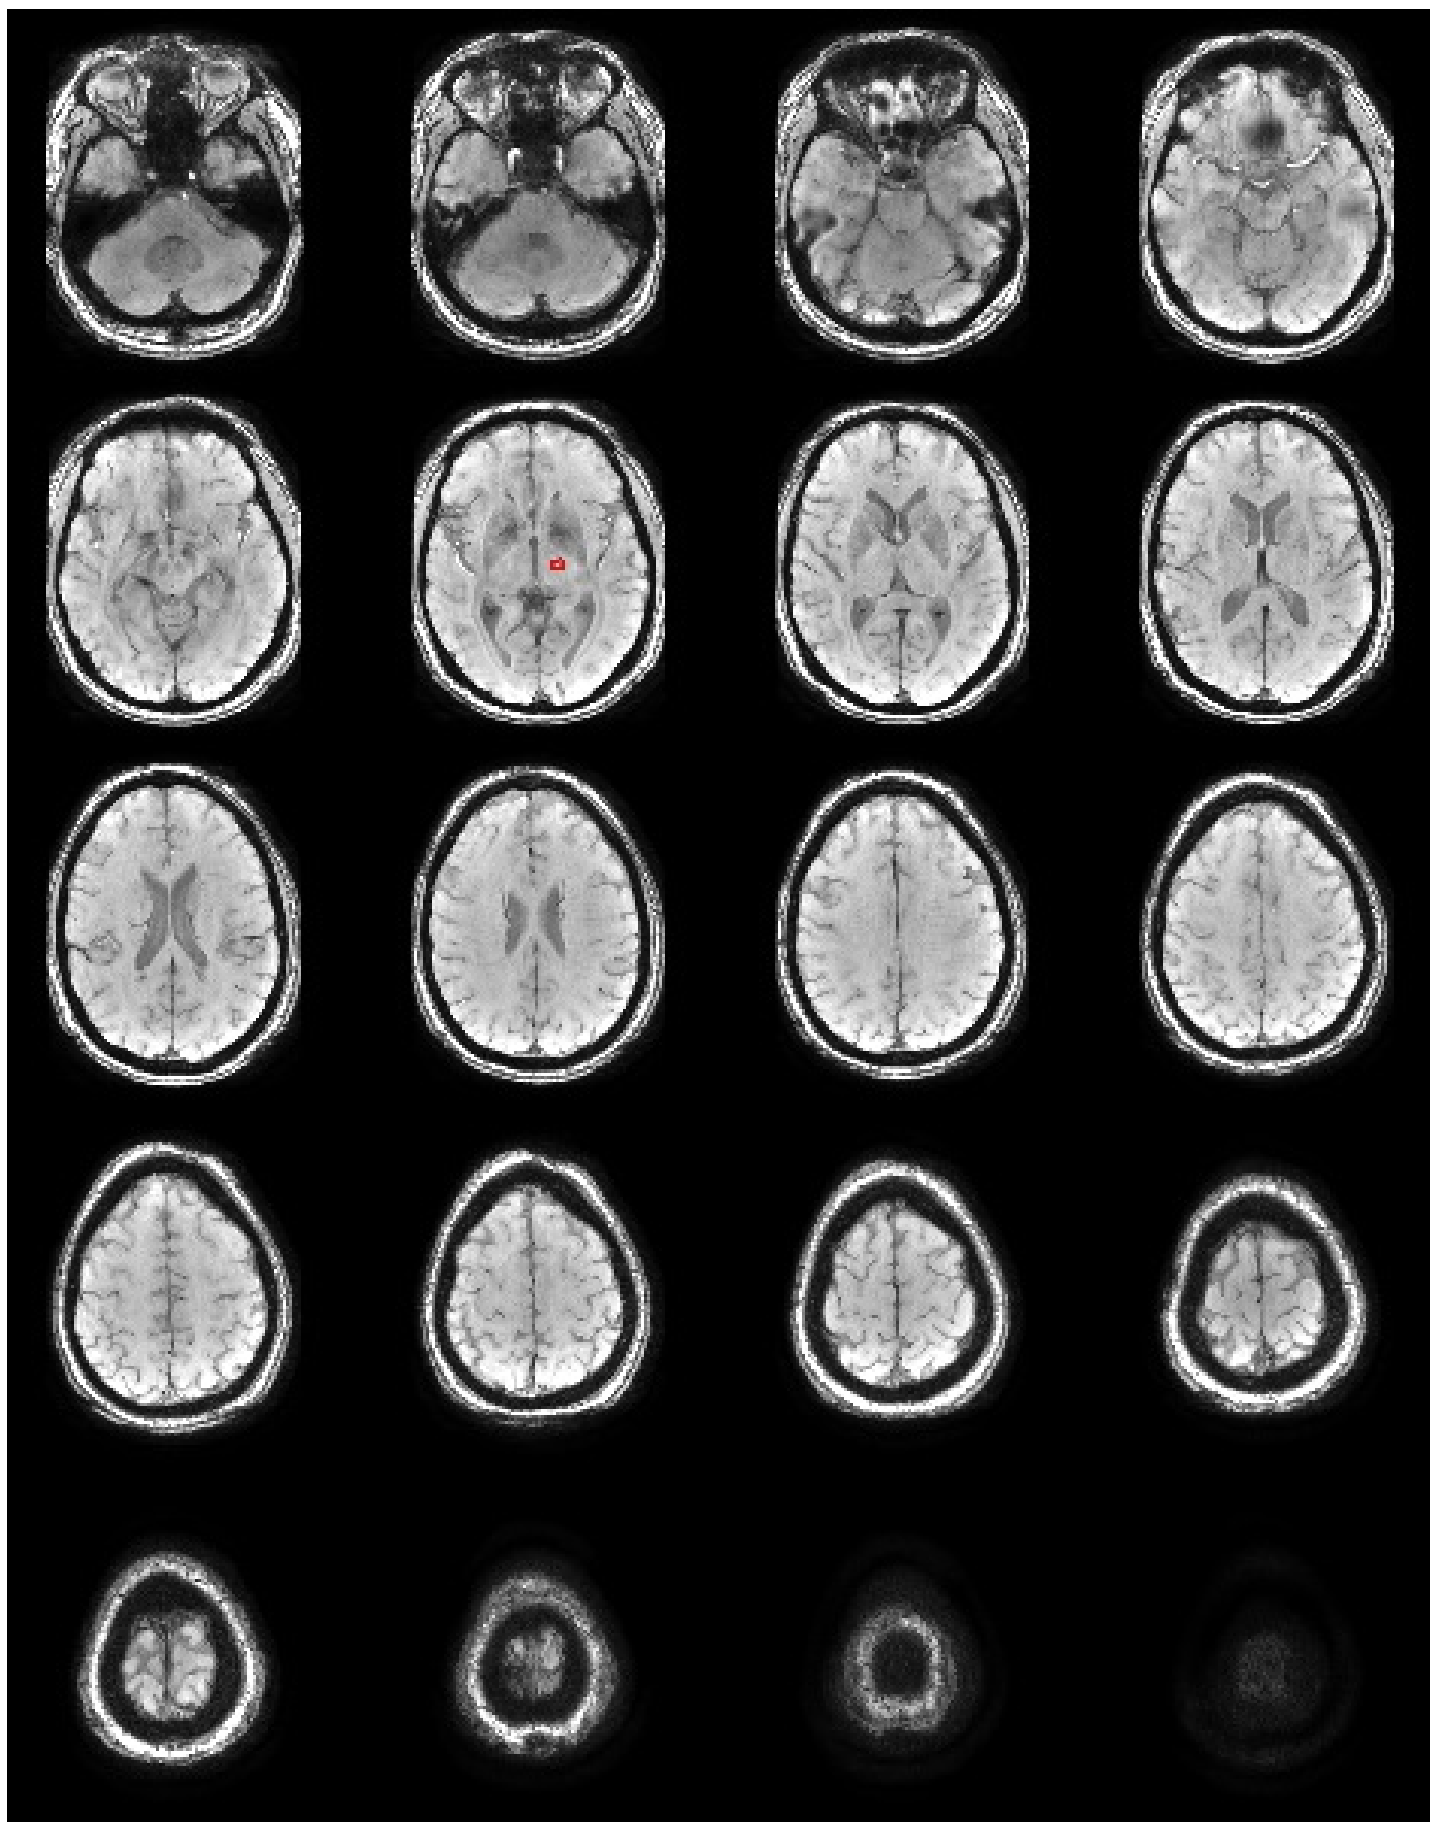

Lesión Paciente X

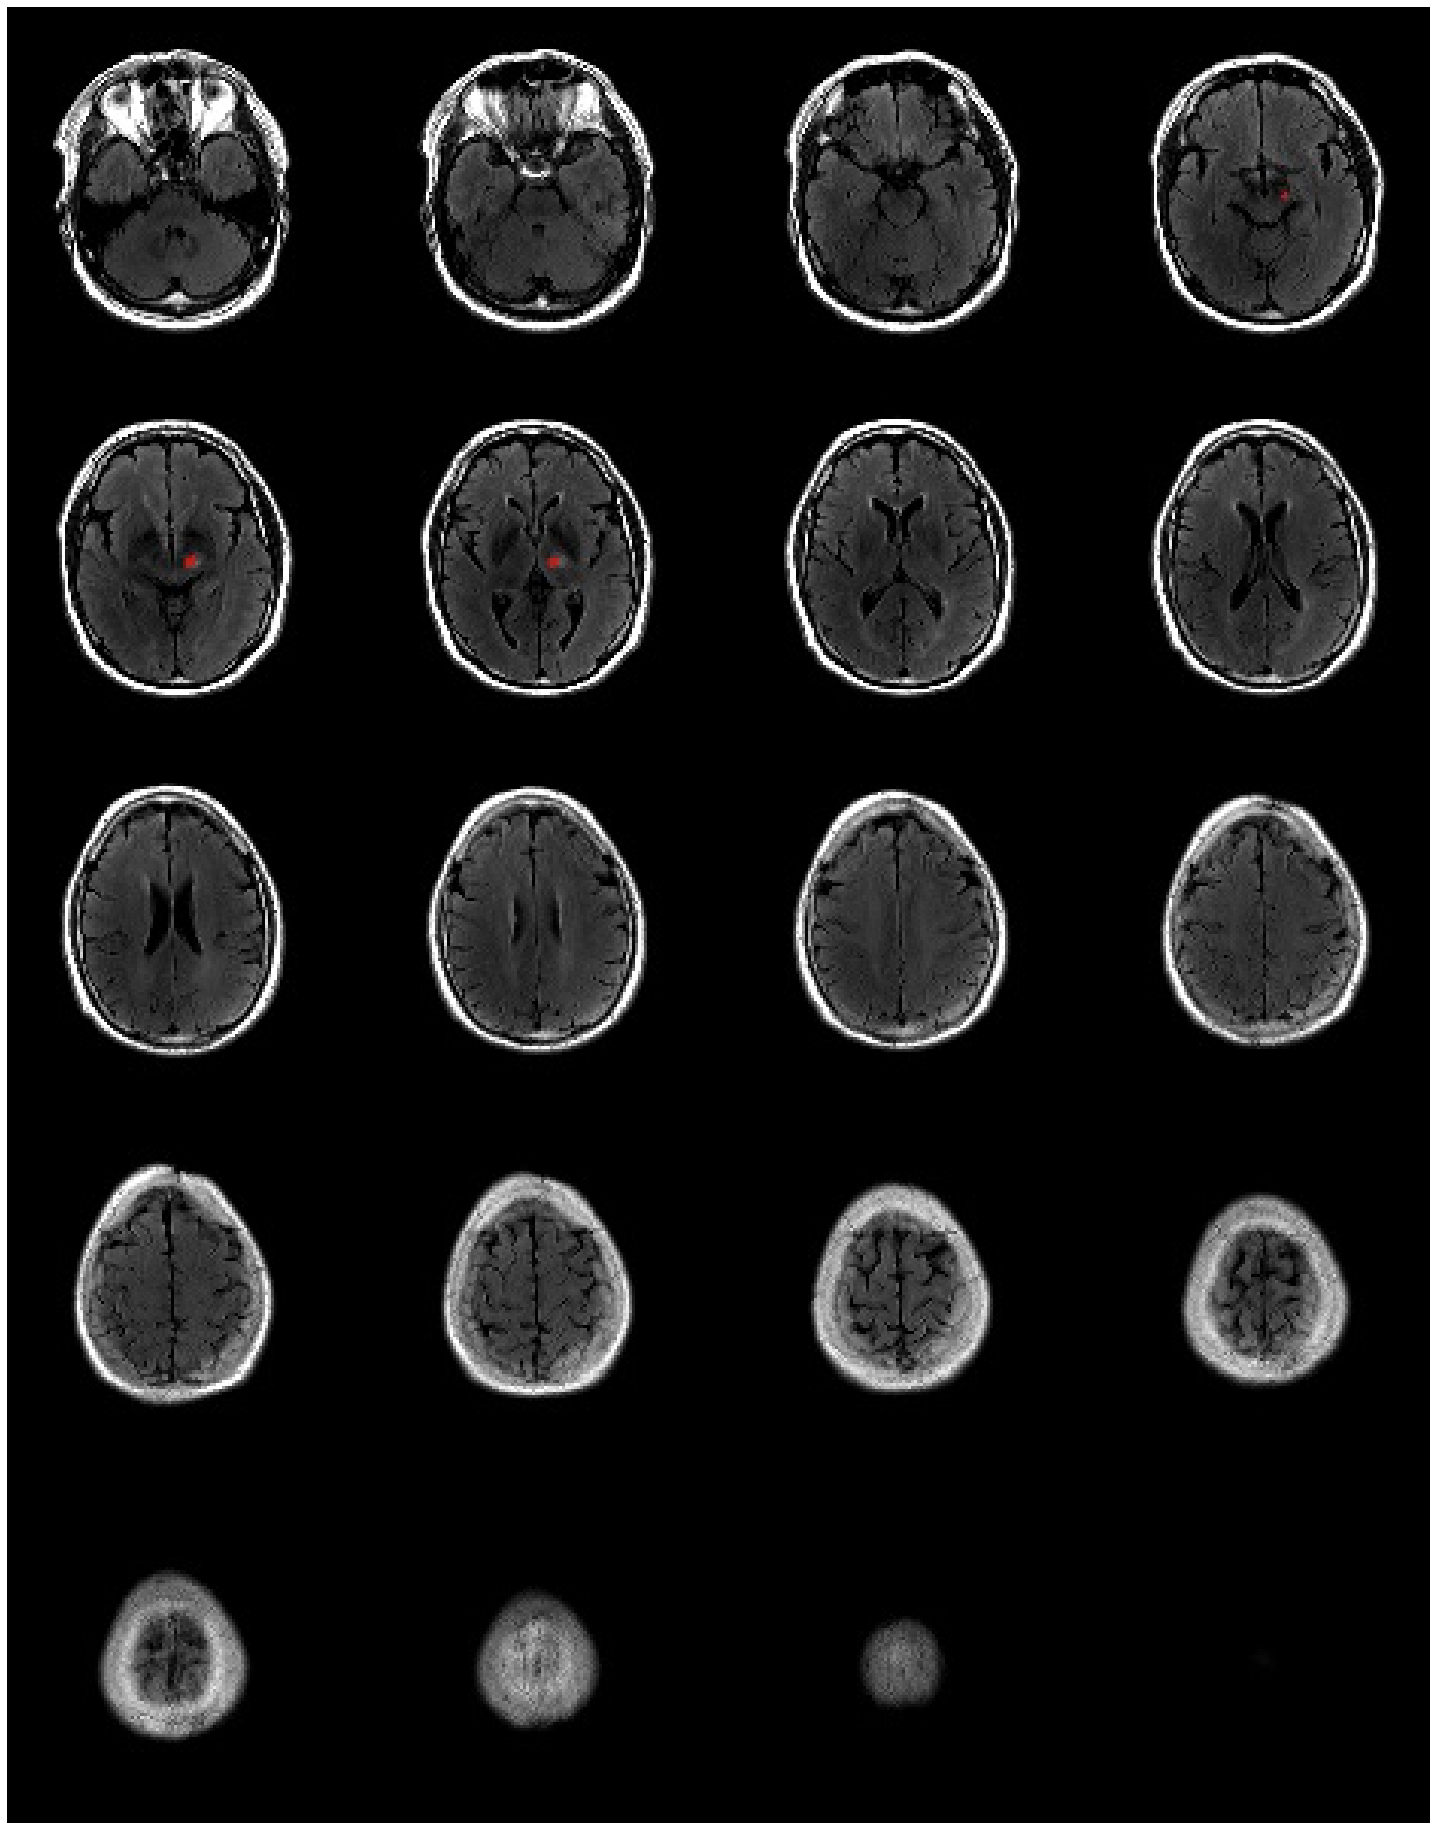

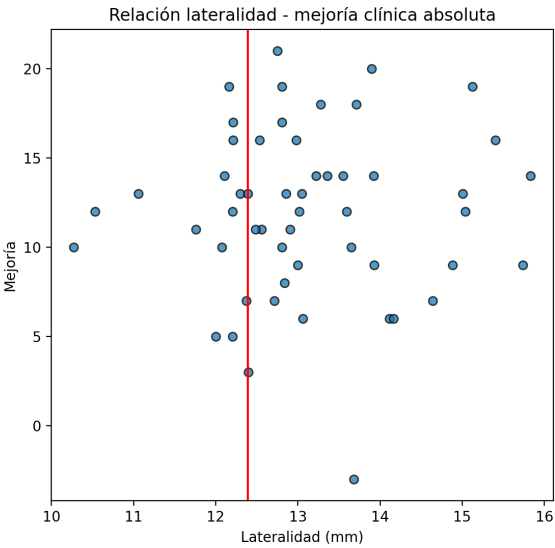

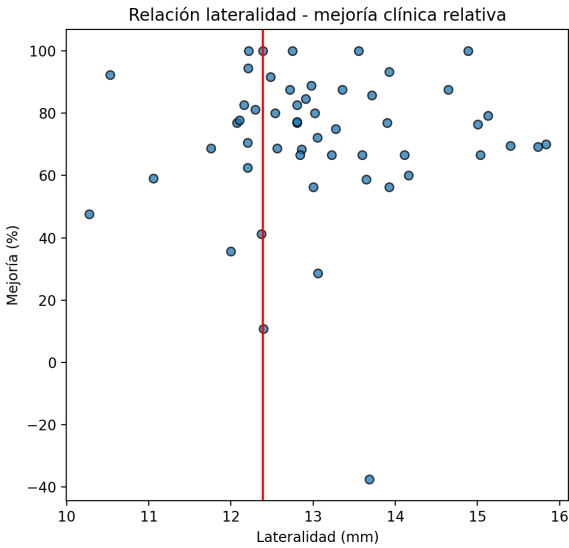

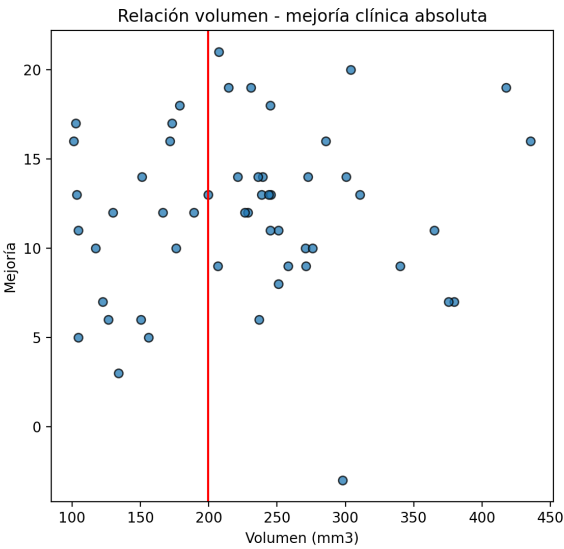

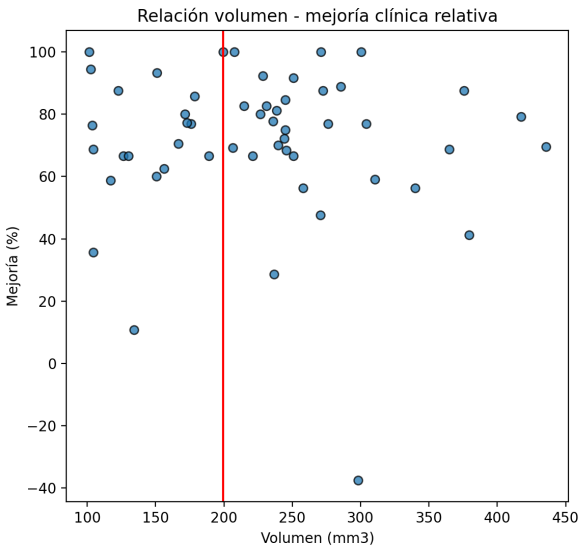

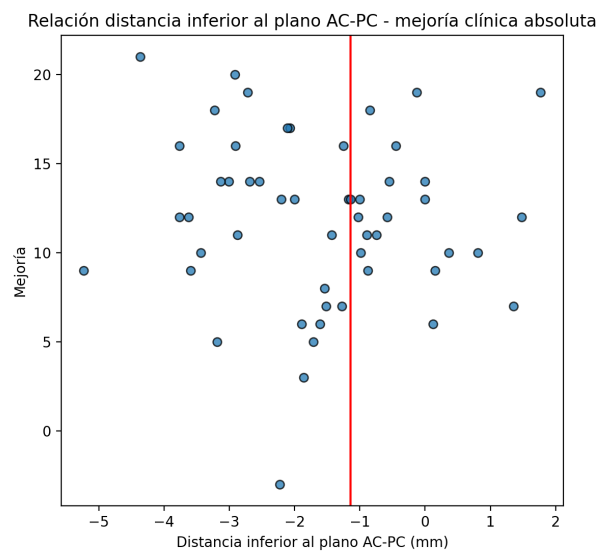

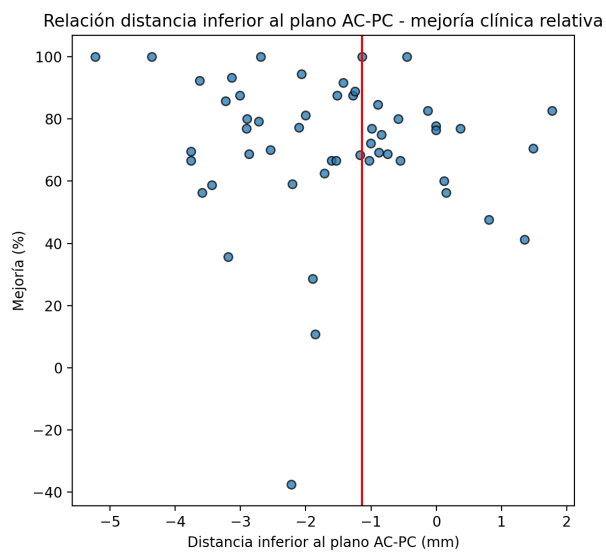

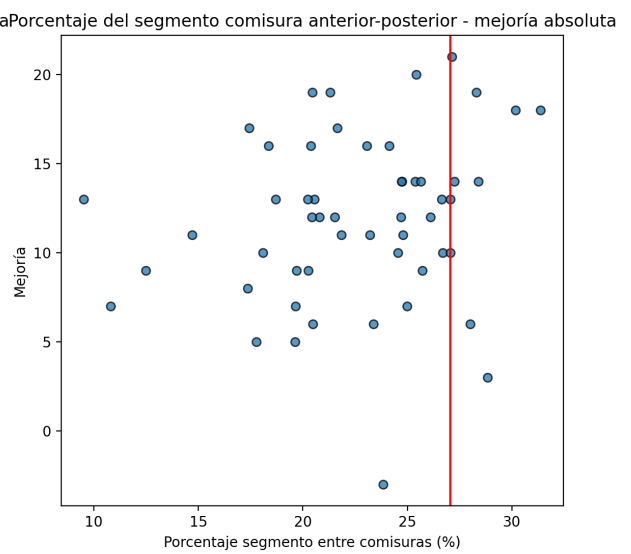

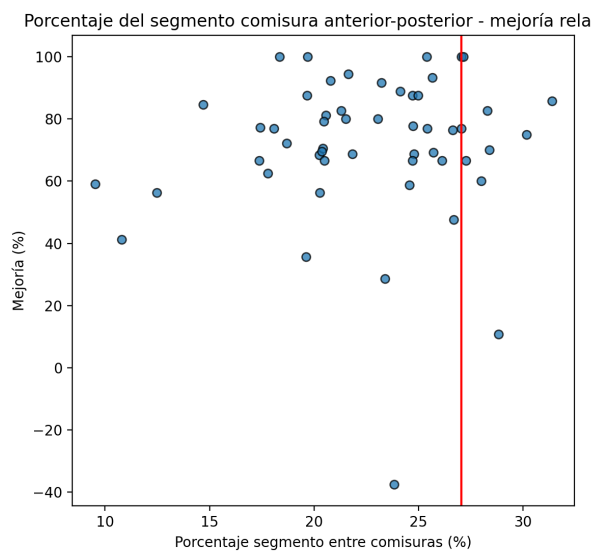

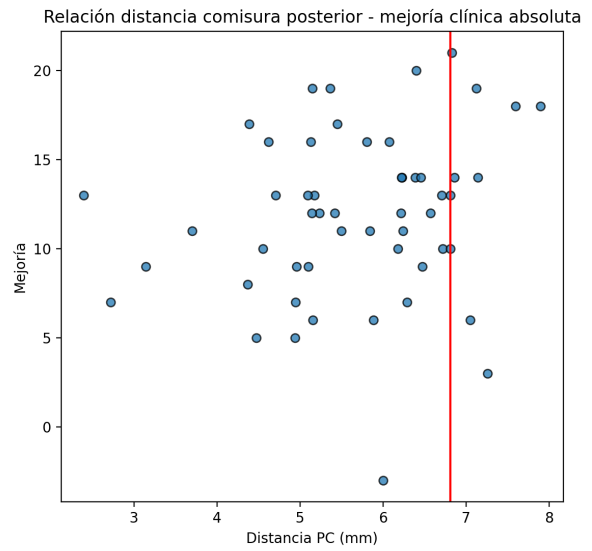

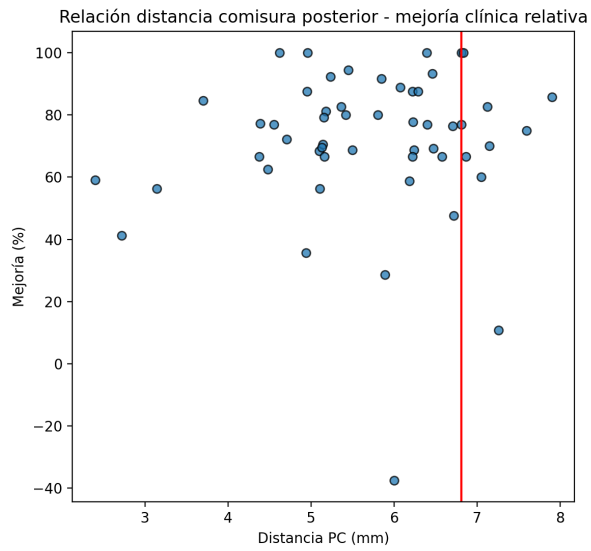

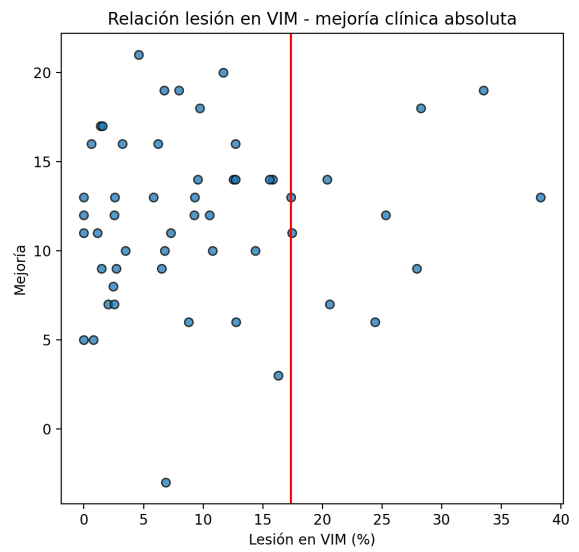

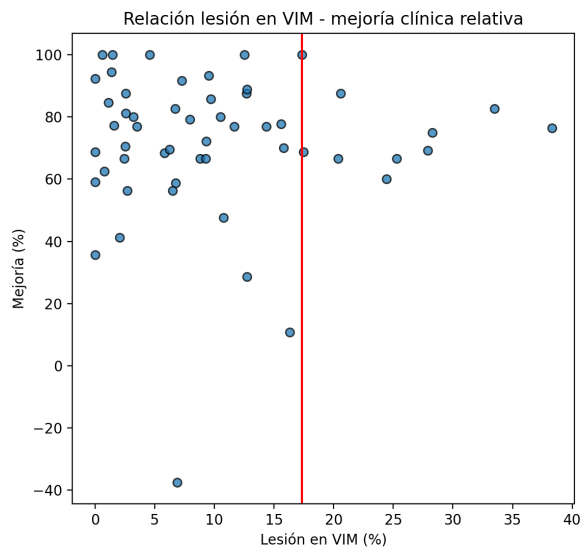

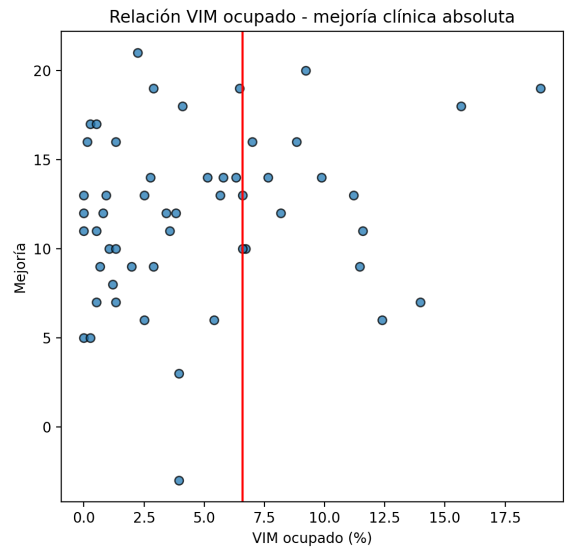

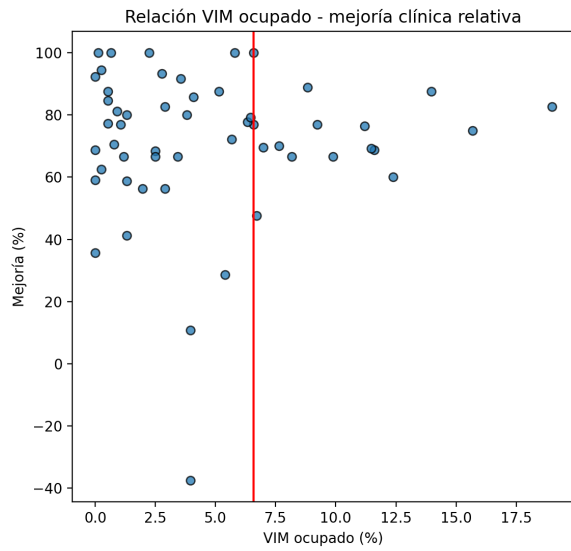

Características de la lesión del paciente:

Volumen	199.4936 mm
Distancia PC	6.8125 mm
Distancia PC (%)	27.0559%
Lateralidad	12.3889 mm
Distancia inferior del plano AC-PC	-1.1389 mm
VIM ocupado por la lesión	6.5876%
Lesión en VIM	17.3611%

Comparación estadística con una población de pacientes a los que se ha aplicado el tratamiento
